Appendix C: Proportion of Kidney PREM responses for each ethnicity group by centre

Tables C1-C5 show the proportions of Kidney PREM respondents in each ethnicity group by treating centre, excluding missing values and those who stated, 'rather not say'. Centres with fewer than seven responses are excluded. All participants are counted in the Kidney PREM figures, including those not receiving kidney replacement therapy (KRT), although percentages in the yellow highlighted columns (UKRR: UK Renal Registry) reflect only the KRT population centre proportions as at the end of 2021. UKRR data are only shown when at least 80% were returned by kidney centres. Frequencies and proportions of Kidney PREM returns between 2019 and 2023 are available for each centre on the Kidney PREM portal at: https://ukkidney.org/audit-research/data-portal/prem

Appendix D: Proportion of Kidney PREM responses for each treatment group by centre

Tables D1 to D5 display the number of Kidney PREM responses received as a proportion of those patients receiving treatment at each centre for each treatment modality group. Centres with fewer than seven responses are excluded. In most centres, the UK Renal Registry only collects data for those patients who are receiving kidney replacement therapy, KRT (i.e., have received a transplant or receive haemodialysis or peritoneal dialysis), so Kidney PREM respondents not receiving KRT have been excluded. Kidney PREM data were collected in the autumn of 2023, whereas the UK Renal Registry patient numbers were recorded at the end of 2021. Some participants selected a modality despite no record of any individuals receiving that treatment at their centre, presumably due to the delay between each data collection; these percentages cannot be calculated and are left blank.

In a survey of this type, 10-30% response is generally expected, so response levels above 30% are remarkable and below 10% are low. Caution should be used when interpreting statistics where the absolute number of responses is less than 20 within any particular group, unless the centre is small such that the sample is less than one fifth of the individuals in that centre.

Appendix J: Unit abbreviations, satellites and response numbers

These tables display the abbreviation used for each centre and the satellite units for that centre. Numbers in brackets show the amount of Kidney PREMs returned per centre or unit if at least seven responses were received. For most centres, satellite unit responses do not add up to main centre response numbers because at least one unit returned fewer than seven Kidney PREMs. When this is the case, they would not be identified in satellite unit-level data but are included in the centre-level data.
